

## ZEE Print

Your perfect printing solution

- ZeePrint Thin
- ZeePrint Report
- ZeePrint Archive
- ZeePrint For Print Server

### A sensitive issue

Printing failure, undetected printers, insufficient, bad installation of pilots, lack of visibility on printers management...In a company, users often complain about printing, but information is often not very clear....

ZeeTim engineers addressed these issues by designing solutions that are adapted to the large number of deployed architectures. The goal is to simplify the management of printers as well as offering a qualitative user experience.

### ZeePrint Thin

ZeePrint Thin simplifies the printing in a virtual environment via a unique virtual printer for all users. With ZeePrint Thin, you do not need an automatically created printer or a script. You can enjoy a reinforced stability of your servers and do not have to install printer drivers anymore.

ZeePrint Thin is compatible with all Citrix ICA/HDX and Microsoft RDS clients. A compressed flow is sent to the printer and bandwidth consumption is also reduced for a fluid and optimized access to applications, without any quality loss.

### ZeePrint for Print Server

ZeePrint for Print Server allows compression of every print job, resulting into significant reduce of bandwidth. This solution also allows managing all the printers available on the network thanks to a unique and centralized console.

ZeePrint for Print Server provides a high availability of the infrastructure which allows to configure several available services thanks to a load balancing mechanism.

### ZeePrint Report - ZeePrint Archive

ZeePrint Report insures a detailed reporting on every printing task performed through ZeePrint. It's a web portal with data such as number of prints per user, number of pages, most used printers, etc. You can also generate monthly reports about the trends of your printing infrastructure.

ZeePrint Archive allows archiving all your printed documents in a secure way. You can access these documents anytime via a web interface and users can visualize their printed documents and edit it, if needed.

## TECHNICAL FEATURES

Solutions	Compatibility
ZeePrint Thin ZeePrint for Print Server	Windows Server 2008 - 2008 R2 Windows Server 2012 - 2012 R2
ZeePrint Client	Windows 7 Windows 8 - 8.1 Mac OSX 10.7 -10.8 - 10.9
Modules	Features
ZeePrint Thin	Simplifies printing in a Citrix or RDS environment thanks to a unique virtual printer for all users
ZeePrint Client	Ensures reception of printing through existing virtual channel from a ICA/ HDX or RDS session
ZeePrint Server	Compresses print flows before sending them to distant printing stations
ZeePrintD	Decompresses printing flows and send them to printers
ZeePrint Archive	Archives printed files in a database
